

TMS Induced Performance Enhancement

IRB#HSC20060041H

Healthy volunteers needed

The Research Imaging Center at the UTHSCSA is seeking healthy individuals who are **18-50 years old and right handed** to participate in a study to understand how the brain learn new motor skills and if brain stimulation will help.

Subjects who agree to participate in the study will undergo sessions of brain imaging scans to measure brain structure and activities and hand muscle activity measurement. Subjects will make daily visits to the RIC for four weeks to do finger tapping and have brain stimulation.

Compensation for participation (\$10-\$50/hr) is available
