

Expanding A Neural Model Of Speech Using Virtual Lesions
And Connectivity Studies

IRB#HSC20080426H

Healthy volunteers needed

The Research Imaging Center at the UTHSCSA is seeking healthy individuals who are **21-55 years old, right handed and English speakers** to participate in a study to examine the human speech system.

Subjects who agree to participate in the study will make three visits to the RIC in four weeks and will undergo sessions of Magnetic Resonance Imaging (MRI), Transcranial Magnetic Stimulation (TMS), speech recordings, and Positron Emission Tomography (PET).

Reimbursement of \$ 200 for a completed study
